12 metre fast workboat

Scale Model Kit

difficulty level: 2/4 Scale: see underside of hull

Required:

Scissors

Double-sided tape or dry glue such as Pritt-Stick

Tip for Pritt-Stick - after sticking, hold firmly for a count of 20 to allow the glue to set before moving on to the next step.

Wet glue such as Gloy or PVA is not suitable, as it takes too long to set, and may make the card wrinkle.

Instructions should be attached - if not log onto marinedesign.co.uk to download a set.

This kit is also available for download.

NOTE: do not mix parts from printed and downloaded models, as the scale on downloaded models may not be exact.
